

Developer Quick Command Cheat Sheet

Terminal / Bash Basics

- `cd path/to/dir` → Change directory
- `ls -la` → List all files with details
- `pwd` → Print current directory
- `cp file.txt ../dest/` → Copy file to directory
- `mv file.txt ../dest/` → Move file
- `rm file.txt` → Remove file (use `-r` for folders)
- `grep "search" file.txt` → Search in file
- `history | grep keyword` → Find command in history
- `!!` → Repeat last command
- `Ctrl + R` → Search command history interactively

Git Essentials

- `git status` → Check repo status
- `git add .` → Stage all changes
- `git commit -m "message"` → Commit changes
- `git push origin main` → Push to main branch
- `git pull origin main` → Pull latest from main branch
- `git log --oneline --graph --decorate` → Pretty log view
- `git checkout -b new-branch` → Create/switch branch

Python Shortcuts

- `python script.py` → Run script
- `python -m venv venv` → Create virtual environment
- `source venv/bin/activate` → Activate venv (Linux/Mac)
- `venv\Scripts\activate` → Activate venv (Windows)
- `pip install package` → Install package
- `pip freeze > requirements.txt` → Export dependencies

VS Code Productivity

- `Ctrl + P` → Quick open files
- `Ctrl + Shift + P` → Command palette
- `Ctrl + /` → Toggle comment
- `Alt + Up/Down` → Move line
- `Ctrl + D` → Select next match
- `Ctrl + B` → Toggle sidebar
- `Ctrl + ``` → Toggle terminal

- `Ctrl + \` → Split editor
- `Ctrl + 1 / 2 / 3` → Focus on split view group
- `Alt + Click Tab` → Split editor to the side

Microsoft Windows Desktop Shortcuts

- `Win + D` → Show/Hide desktop
- `Win + E` → Open File Explorer
- `Win + L` → Lock your PC
- `Win + Tab` → Task view
- `Alt + Tab` → Switch between open apps
- `Win + Arrow Keys` → Snap windows to screen edges/corners
- `Win + Shift + S` → Screenshot tool (Snip & Sketch)
- `Win + Ctrl + D` → Create new virtual desktop
- `Win + Ctrl + Left/Right` → Switch virtual desktops
- `Win + R` → Run dialog
- `Ctrl + Shift + Esc` → Open Task Manager
- `Alt + F4` → Close active window

JSON & Data Handling

- `jq . file.json` → Pretty-print JSON
- `jq '.key' file.json` → Extract value
- `jq '.[0] | .name' file.json` → Loop over array items
- `python -m json.tool file.json` → Pretty-print JSON in Python

Electron / NPM Commands

- `npm install` → Install dependencies
- `npm run start` → Run app in dev mode
- `npm run build` → Build app
- `npx electron .` → Launch Electron app

Tip: Keep this list in your terminal's MOTD or VS Code Snippets for fast recall.
