```

```
|— README.md           # High-level intro for GitHub
|— LICENSE (optional)
```

Suggested Cleanups

- Move `Currency/` into `assets/currency/`
- Move `Dev Tools/` into `dev_tools/`
- Organize `Docs/` into:
 - `docs/design_docs/`
 - `docs/dev_docs/`
 - `docs/marketing/`
- Move markdown from `readme.md/` into project root as `README.md`
- Place gameplay mechanics in `gameplay/`
- Move `zoom_hub.py` into `scripts/`

GitHub Readiness Tips

- Use `README.md` at the root to describe the full project.
- Add a `.gitignore` tuned for your engine (Unity, Godot, WebGL, etc.)
- Structure documents with lowercase_snake_case or kebab-case for clarity.
- Place design diagrams in `docs/design_docs` or `assets/reference/`
